

*REMARKS*

Reconsideration of the above-identified application is respectfully requested in view of the foregoing amendments and the following remarks.

*The Pending Claims*

Claims 1-28 are currently pending. Claims 1-28 are directed to direct-to-plate methods of lithographic printing with a reusable substrate having a hydrophilic surface.

*The Amendments to the Claims*

The claims have been amended to more particularly point out and distinctly claim the invention. In particular, claim 1 incorporates the subject matter of claim 8, thereby reciting that the cleaning solution comprises an aqueous emulsion of an alcohol and a cyclic compound having at least one double bond. Claim 8 has been cancelled, without prejudice.

As well, claims 5, 11-13, and 18 have been amended to delete the words "such as a cloth, a rotating brush or by jetting water or a volatile medium." New claims 29-33 have been added, incorporating the subject matter deleted in claims 5, 11-13 and 18. No new matter has been added by way of the amendments.

*Summary of the Office Action*

Claims 5, 11-13, 17, 18, 24, 27 and 28 stand rejected under 35 U.S.C. § 112, second paragraph, as being indefinite.

Claims 1-7 and 9-20 stand rejected under 35 U.S.C. § 103(a) as being unpatentable over Vermeersch et al. (EP 802,457) in view of Nussel et al. (U.S. Patent No. 5,816,161) and Timpe et al. (U.S. Patent No. 5,698,360). Claims 8 and 21-28 stand rejected under 35 U.S.C. § 103(a) as being unpatentable over Vermeersch et al. in view of Nussel et al. and Timpe et al., further in view of Walls (U.S. Patent No. 4,351,895).

*Discussion of the Indefiniteness Rejections*

The claims have been amended to no longer recite the "such as" clause cited by the Office, in claims 5, 11-13 and 18. Claims 17, 24, 27 and 28 depend from the one of the

amended claims, and do not recite the "such as" clause. As such, the indefiniteness rejection is considered moot, and should be withdrawn.

*Discussion of the Obviousness Rejections*

The subject matter of claim 8 has been incorporated herein into independent claim 1. Thus, the only remaining obviousness rejection would be predicated on Vermeersch et al. in view of Nussel et al. and Timpe et al., further in view of Walls, which was the only rejection set forth in the Office Action against claim 8. However, the rejections of the claims premised on Vermeersch et al. in view of Nussel et al. and Timpe et al., and further in view of Walls, is considered improper, inasmuch as the cited references, even in combination, fail to teach or fairly suggest the present inventive methods.

As recognized by the Office, Vermeersch et al., Nussel et al. and Timpe et al. do not describe or suggest an aqueous emulsion of an alcohol and a cyclic compound having at least one double bond. Walls is similarly deficient. Walls only discloses cleaning *solutions* (see, e.g., Walls, Abstract at line 5, and col. 2, line 9, reciting an "aqueous solution"), as compared to the aqueous *emulsions* recited in the amended claims. For example, at column 2, lines 63-64, Walls states that "The composition also contains a *water miscible solvent*, preferably one having a high boiling point." Walls further describes "water miscible" as meaning that "a fully stable solution [of the solvent with water] is realized." (Walls at column 3, lines 1-2). The examples in Walls are directed to solutions comprising cyclohexanone, which is known in the art to be water soluble (see, e.g., C.R.C. Handbook of Chemistry and Physics, 60th Ed. (1979) at C-80, C-264, appended hereto as Attachment A). Finally, Walls describes the claimed solution as being thick *clear* solutions (Walls, col. 4, line 65 (Example 2)). As such, Walls teaches away from the *emulsions* recited in the pending claims, which are milky liquids.

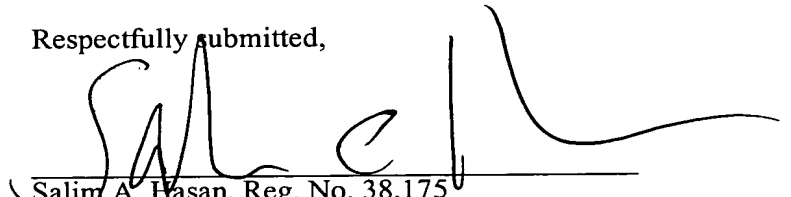

Therefore, in view of the failure of Walls to remedy the deficiencies of Vermeersch et al., Nussel et al. and Timpe et al. with respect to the claimed invention as discussed above, Applicants respectfully request the rejections under 35 U.S.C. § 103 (a) be withdrawn.

Application No. 10/016,960

*Conclusion*

The application is considered in good and proper form for allowance, and the Examiner is respectfully requested to pass this application to issue. If, in the opinion of the Examiner, a telephone conference would expedite the prosecution of the subject application, the Examiner is invited to call the undersigned attorney.

Respectfully submitted,

Salim A. Hasan, Reg. No. 38,175

1 For I.U.C. rules of nomenclature see General Index.

2 Generally means ethyl alcohol.

3 The abbreviation of a color ending in "sh" is to be read as ending with the suffix "-ish," e.g., grsh means greenish.

4 D, L generally mean configuration and d, l generally mean optical rotation, but there are many examples in the chemical literature for which the meaning of these symbols is ambiguous and/or interchangeable.

5 Generally means diethyl ether.

6 N indicates a position in the molecule.

7 s and sec, or t and tert, are used as convenient.
